RESULT ENTRY TITLE

Database:

pir60 1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 47.121; Variance 120.640; scale 0.391

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

MPsrch\_pp protein - protein database search, using Smith-Waterman algorithm

Tabular output not generated. Run on: Wed Nov 24 00:44:36 1999; MasPar time 7.74 Seconds 785.202 Million cell updates/sec

Description: Perfect Score:

>US-09-103-287-4
(1-215) from US09103287.pep
1 FKDSDDIYAQIFQITDKGTA......GDIQKLQNAYLDKLGMKNAF 215

Scoring table: PAM 150 Gap 11

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot37 1:swissprot

Statistics: Mean 48.359; Variance 105.436; scale 0.459

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-!- CATALYTIC ACTIVITY: ATP + UDP-N-ACETYLMURAMOYL + L-ALANINE
-!- RATHOPHOSPHATE + UDP-N-ACETYLMURAMOYL-L-ALANINE.
-!- PATHWAY: PEPTIDOGLYCAN BIOSYNTHESIS.
-!- SUBCELLULAR LOCATION: CYTOPLASMIC (PROBABLE).
-!- SIMILARITY: BELONGS TO THE MURCDEF FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-FEB-1995 (REL. 31, CREATED)

-!- FUNCTION: CELL WALL FORMATION (BY SIMILARITY).
-!- CATALYTIC ACTIVITY: ATP + UDP-N-ACETYLMURAMOYL + L-ALANINE
ADP + ORTHOPHOSPHATE + UDP-N-ACETYLMURAMOYL-L-ALANINE.
-!- PATHWAY: PEPTIDOGLYCAN BIOSYNTHESIS.
-!- SUBCELLULAR LOCATION: CYTOPLASMIC (PROBABLE).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Q51831;

CATALYTIC ACTIVITY: ATP + UDP-N-ACETYLMURAMOYL + L-ALANINE
ADP + ORTHOPHOSPHATE + UDP-N-ACETYLMURAMOYL-L-ALANINE.

PATHWAY: PEPFILOGLYCAN BIOSYNTHESIS.

SUBCELLULAR LOCATION: CYTOPLASMIC (PROBABLE).

SIMILARITY: BELONGS TO THE MURCDEF FAMILY.

Statistics: Mean 46.142; Variance 99.559; scale 0.463

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
